## AI Song Contest 2026 Submission

To enter the AI Song Contest 2026 please complete this form and attach your **song** (max. 4 minutes), a **cover image**, and a **team image** and your **process document** by **27 September 2026**. Submissions can only be processed if they are complete.

Tu dirección de correo electrónico ([ajmacrodrigo@gmail.com](mailto:ajmacrodrigo@gmail.com)) se registró cuando enviaste este formulario.

The AI Song Contest will not consider songs that were fully generated by AI – that is, songs that were the result of a single output from an AI system. \*

☒ I acknowledge that if I submit a song that is fully AI-generated, it will be disqualified.

**Team Name \***

MCG3

**Your team's affiliation(s) \***

- ☐ artist/band
- ☒ academic
- ☐ creative industry
- ☐ industry research
- ☐ Otros: \_\_\_\_\_

**How did you find out about the AI Song Contest? \***

- ☐ participated before
- ☐ social media
- ☐ web search
- ☒ academia
- ☐ word of mouth
- ☐ Otros: \_\_\_\_\_

Is anybody on your team under 21? (Teams with young human members will be eligible for the AI Song Contest Young Creatives Award.) \*

- ☐ Yes
- ☒ No

**Team bio** (100-150 words)

We are an interdisciplinary collective of undergraduate students bridging the worlds of Computer Science, Mathematics, and Music Production & Composition. United by a fascination with the creative friction between human emotion and algorithmic logic, our work explores the boundaries of computational musicology, algorithmic composition, and contemporary sound design. By combining rigorous mathematical modeling—such as evolutionary genetic algorithms and procedural rule design—with the technical precision of software engineering and the artistic craft of modern music production, we reimagine how technology can collaborate with culture. Rather than relying on autonomous black-box generation, our collective treats code as a dynamic composition partner: algorithms propose unexpected raw structures, while our human ears and musical instincts shape the groove, narrative, and sonic identity. From symbolic MIDI scripts to high-energy club tracks, we build bridges between logic and rhythm, proving that mathematics can truly dance.

**About the song** (100 – 150 words)

Anything you want the audience to know about your song.

\*

"Lobster" is an energetic Latin House track set at 124 BPM in 4/4 time and the key of C major. It blends a driving electronic house groove with rich Latin percussion, progressive toms, shakers, and dynamic fills. At its core lies a lively salsa-style piano montuno, whose melodic material was generated through a custom Python genetic algorithm using evolutionary operators and reproducible seeds. Shaped by human curation and polished in Logic Pro, the track balances punchy compression, clean frequency separation, and dimensional reverb to create an authentic, club-ready fusion of algorithmic composition and Latin dance rhythms.

*For publication on your team page:*

**Summary of the human–AI co-creation process** (200 – 250 words)

Tell the audience how the song was created. What models or tools did you use and why? How did you iterate on them to produce the final outcome? Try to make it as accessible as possible so that even non-techies understand how your song came about.

To create our song, we wanted to merge the energy of electronic house music with the groove of Latin percussion and piano. Instead of using black-box generators, we designed our own transparent, code-driven process using Python. We began by writing a genetic algorithm that mimicked biological evolution to generate melodies. The program produced random musical phrases, graded them against music theory rules (favoring pleasing notes and smooth intervals), and bred the best candidates over several generations with small, randomized mutations. This process yielded two strong melodic themes. Next came human curation and genre styling. A raw melody does not dance on its own, so we remapped the evolved notes onto syncopated salsa piano (montuno) patterns. We experimented with styles like Brazilian funk, reggaeton, and even traditional marimba, but group listening confirmed that the salsa piano meshed best with the driving four-on-the-floor beat.

**Please list ALL the AI tools and databases (where possible) that you used. Please provide a link to each system and database.**

Suggested Form: AI\_MODEL\_NAME (link): DatabaseName1 (link), DatabaseName2 (link)...

Providing this list is **mandatory** for all submissions.

For the purposes of completing your team's process document, it is important for judges to be able to assess the level and manner of the use of AI in each entry. This includes, but is not limited to, a description of the data used to train the AI model. Where this is difficult or impossible to assess, the AI Song Contest reserves the right to disqualify such entries. We therefore encourage entrants to explain their processes as thoroughly as possible.

The AI Song Contest 2026 strongly recommends against the use of AI tools Suno and Udio due to pending litigation. List of [fair AI tools](#) is published on our website. If you have any doubts - please get in touch with us. \*

Custom Genetic Algorithm in Python (<https://www.python.org/>): None (Rule-based / Procedural generation, no external dataset used)

Description & Data: Se implementó un algoritmo genético personalizado desarrollado en Python para la composición y generación melódica simbólica (MIDI). No se entrenó sobre ningún dataset de audio ni corpus musical preexistente. El sistema operó a partir de parámetros matemáticos y reglas de teoría musical codificadas directamente (las doce notas cromáticas, escala de Do mayor, matriz de transición de intervalos, ponderación de triadas C-E-G y duraciones discretas en métrica de 4/4 a 124 BPM).

ChatGPT / Codex (OpenAI) (<https://chatgpt.com/>): Proprietary pre-trained LLM dataset (Web text & code corpora, OpenAI)

Description: Modelo conversacional de lenguaje utilizado exclusivamente como asistente de apoyo técnico para la exploración, depuración y estructuración del código en Python, sin intervención en decisiones artísticas ni generación directa de material sonoro.

**Please indicate for which steps of the process you used AI tools. \***

- ☒ Idea Generation
- ☒ Composition: Melody
- ☐ Composition: Harmony
- ☒ Composition: Instrumentation
- ☐ Composition: Lyrics
- ☐ Composition: Voice Synthesis
- ☐ Evaluation
- ☐ Mixing/mastering
- ☒ Performance
- ☐ Stem-splitting
- ☐ Otros: \_\_\_\_\_

**Live performance** (approximately 100 words)

How well do you think your piece could be performed live? What would the challenges be?

**We agree that any text, audio and visual material submitted to the AI Song Contest may be used by the AI Song Contest and/or its affiliates, in the promotion of the contest and affiliated events. \***

☒ Agree

**Names, emails, and countries of all team members**

 MCG3 Process Document AI Song Contest 2026 - Rodrigo Ajmac.pdf

We plan to make an overview and analysis of the process documents from all of the teams for the public. The result may be a scientific paper that summarizes how different teams approached the problem and to improve future AI song contests.

**Do you consent to having your process document included in this study?**

☒ Yes, I/we consent to having the process document included in research studies.

**Optional: Link to music video**
